

What is Github ?

Part 3

What's a Github README ?

README is the first file one should read when starting a new project. It's a set of useful information about a project and a kind of manual.

Why is it a good practice ?

A nice README is a good way to help people engage in the project as well. A project with nice README and screenshots will get the attention of users better since it's a direct way to explain why this project matters, and why people should use and contribute

Profile README's

You can share information about yourself on GitHub by creating a profile README. GitHub shows your profile README at the top of your profile page.
